“Float Check” Float Testing Tool

Sim/Tech Filter’s Float Check is a tool designed to make checking floats quick, easy and safe.

The float can be scooped from underneath or on top. The float cord goes into the float check’s slot.

Then slide the float check over the float. While lifting the float apply torque to the handle so that you are pulling the float away from the float holder. This will hold the float in the float check.

When the float reaches the appropriate angle it will trigger the switch and you will know whether the float is working properly.

Note: The handle accepts 1/2” pipe or plastic conduit to meet your needed length.
